

This is the entry point to the paper-based Manual_AES algorithm. Before proceeding further, please check that you have all required forms in the required number, as the kit formulation depends on key length, plaintext message length and mode of operation. Following is an example of supported mode of operation with inventory of page to print :

Cipher Configuration	AES 128 bit, 16 char plaintext, ECB 1-block
Round number	10
Required forms	<ul style="list-style-type: none"> • KeySchedule::128::Main : 1 copy of 1 page • KeySchedule::128::3to10 : 1 copy of 3 pages • PlainTextInput (contains first round) : 1 copy of 1 page • EncryptRound : 8 copy of 1 page • FinalRound : 1 copy of 1 page
ASCII Key length	16 char (128 bits)

Please make sure to also have the annex documents, required for all modes :

- ASCII converter table w/ nibble XOR table (Annex::ASCII)
- AES S-Box Direct and Reverse (Annex::S-Box)
- Rijndael Field Multiplication Lookup Table (Annex::Galois - 2 pages)
- (Optional) Rijndael RCON table

User-Defined Parameters

Key Length : bit (128/192/256)

ASCII Key :

												128 bit						192 bit						256 bit								

How to proceed ?

Start with Manual_AES::KeySchedule::128::Main and follow the instructions from there to Manual_AES::FinalRound. A example run could be : KeySchedule::Main > Key::Schedule::3to10 > PlainTextInput > EncryptRound 8 times > FinalRound

Transcription into the key matrix + Set iteration i = 0 1

\oplus denotes the bitwise XOR operation (lookup table available as annex)

Round Key 0
Use in round 1 directly

The MixColumn step takes place in the Rijndael Galois field; We use lookup table instead of the real Galois multiplication operator. For example, $0x8b$ multiplied by 2 is $0x0d$.

	$0x\cdot0$	$0x\cdot1$	$0x\cdot2$	$0x\cdot3$	$0x\cdot4$	$0x\cdot5$	$0x\cdot6$	$0x\cdot7$	$0x\cdot8$	$0x\cdot9$	$0x\cdot a$	$0x\cdot b$	$0x\cdot c$	$0x\cdot d$	$0x\cdot e$	$0x\cdot f$
